CRYPTOITDATA

Sentinel

Autonomous security agent for Linux servers exposed to the internet. It detects, decides and alerts in under two minutes — and can stop the attack on its own.

Product sheet · 20 October 2026 · every figure is measured on our own production server, last 30 days

In one sentence: a security analyst that never sleeps, costs what a licence costs, and asks for your signature before it touches anything irreversible.

MEASURED IN PRODUCTION · LAST 30 DAYS

1,741
incidents after correlation
from 53,642 detections

100 %
got an automatic action
1,741 of 1,741

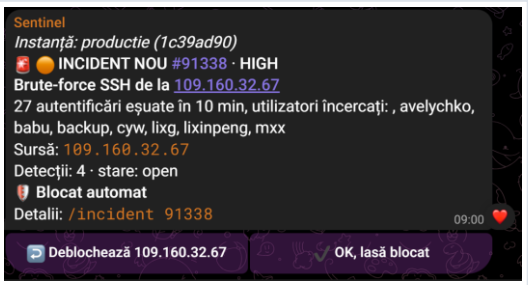

105 s
from incident to phone
median, not the best case

1,047
addresses blocked right now
with expiry and allowlist

HOW IT WORKS

1. **Collection** journald, auditd, nginx, Suricata · 334,752 events
2. **Detection** deterministic rules, no model · 53,642
3. **Correlation** an attack becomes one incident, not 300 alerts · 1,741
4. **AI triage** the model steps in after the rule has decided · $2.76 / 30 days
5. **Notification** Telegram, with buttons in the message · median 105 s
6. **Response** nftables block, with expiry and allowlist · 1,047 active
7. **Self-check** 79 checks of its own, every 5 minutes
8. **External witness** another machine confirms the server is alive · signal every 60 s

REAL SCREENSHOT

The alert reaches the phone, with the action buttons in the message.

WHAT MAKES IT DIFFERENT

- **It decides on the server.** Your logs go nowhere; the analysis happens where the events are produced.
- **The rule decides, the model explains.** No model output ever reaches the firewall, the shell or the package manager.
- **It checks itself.** A security product fails most dangerously in silence. 79 checks look for exactly that.
- **It has an outside witness.** An agent that dies cannot report that it died — the alert comes from another machine.

PRICING

Launch offer: all prices halved, until 31 December 2026.

Setup
−50% €1,000
excl. VAT · one-off, per server
in Romania: €900 excl. VAT
Assessment, installation on your stack, 72-hour calibration, handover with documentation.

Managed
−50% €109
excl. VAT · per month, per server
in Romania: €88 excl. VAT
Everything in Setup, plus: we review incidents monthly, patch plans, monthly report.

Fleet
on request
project-based
Several servers or clients: per-machine configuration, own thresholds, negotiated SLA.

Volume discounts −10 % from 3 servers, −20 % from 6, −30 % from 11. **Annual payment** −8 %. Setup is included from 3 servers. Minimum 24-month term. The launch price stays locked for the whole term; from 1 January 2027 the list price applies.

We start with a conversation, not an invoice.

An exposure assessment on a single server, with no commitment.
